

1-6. (Cancelled).

7. (New) A web content downloading method for a network kiosk associated with a store comprising the steps of:

(a) storing a schedule containing a number of web content addresses and corresponding download times by the kiosk, wherein the download times are chosen to occur when the kiosk is not being used by an operator to select and browse web pages;

(b) waiting until the download times in accordance with the schedule by the kiosk; and

(c) downloading and storing web content at the web content addresses at the download times in accordance with the schedule by the kiosk.

8. (New) The method of claim 7, further comprising:

(d) receiving the schedule from an in-store server by the kiosk.

9. (New) The method of claim 7, wherein the web content comprises media files.

10. (New) The method of claim 7, wherein the download times occur after store hours when the kiosk is without an operator.

11. (Currently amended) A network kiosk comprising:
a display; and

a computer which stores a schedule containing a number of web content addresses and corresponding download times, wherein the download times are chosen to occur when the kiosk is not being used by an operator to select and browse web pages, for waiting until the download times in accordance with the schedule, and for downloading and storing web content at the web content addresses at the download times in accordance with the schedule.

12. (New) The kiosk of claim 11, wherein the computer is also for receiving the schedule from an in-store server.

13. (New) The kiosk of claim 11, wherein the web content comprises media files.

14. (New) The kiosk of claim 11, wherein the download times occur after store hours when the kiosk is without an operator.
